## Natural Gas Production

Since the start of America's energy renaissance in 2007, U.S. production of shale gas has increased from 5 billion cubic feet (BCF) per day to 36 BCF per day, making the U.S. the world's largest natural gas producer since 2011. **Shale gas now constitutes over half of U.S. natural gas production, with over 30% of shale gas production in 2014 coming from the Marcellus field in Pennsylvania and West Virginia.**
